--ABSTRACT OF THE DISCLOSURE

A recombinant heteromultimeric protein including at least (a) a polypeptide fusion molecule A consisting of a C4BP  $\alpha$ -chain C-terminal fragment and a polypeptide fragment heterologous to said  $\alpha$ -chain, and (a) a polypeptide fusion molecule B consisting of a C4BP  $\beta$ -chain C-terminal fragment and a polypeptide fragment heterologous to said  $\beta$ -chain, wherein (a) and (b) are linked in the C-terminal portion to form said multimeric protein. --
